Quick, light, entertaining

By J walt

The author certainly gets what the ROF books are all about, and avoids getting bogged down in excessive detail. This is written in a very Eric Flint pacing, with the story progressing quickly.

In only 90 pages, there just isn't any great character development. In fact, we just barely get a chance to know them.

It feels a lot like the first third of a novel, rather than a novella. I say that not so much as a slam, but in the hope that there is more to come. It's well written, and it captures the sense of adventure that makes this series great.

Good little story

By Larry Gillham

This is a perfectly nice little (very short) novel. Enjoyed the book, but.....reason for the 3 is that the character development although good, falls far short of what I have become used to in the ring of fire series. This is in essence a very pleasant, Long - Short story. Would have liked a little more technical detail about what and how steel would be produced using the stories scenario and more development of the characters.

As a general statement concerning the series as a whole, I would like to see in all of the Ring of Fire series some consideration given to differing standards of beauty. The downtime female protagonist is "beautiful", but in reality how would a typical uptime man view a woman with very hairy legs and other body parts.

Obviously standards of beauty change with both exposure and experience but I've always been bothered by the "love at first site scenarios" in the Ring series, especially in the 1632 and 1633 time frame before experience has reeducated our standards of beauty. The dress of the day would obscure or conceal some of these beauty differences but still.....

Good addition to Ring of Fire series

By Robert

I have long been a fan of the alternative history Ring of Fire series, published by Baen, that began with Eric Flint's "1632." Recently some worthy books could not fit into Baen's overall publishing schedules and are being published by the new Ring of Fire Press Fiction. This book describes the complexity of introducing and building a steel industry in the 1600's in a well told story.
