Really great book

By A Customer

Original illustrations by Rikyu Watanabe!!!!

The second world war represents a classic period in the refinement and perfection of the propeller driven military flying machine. This generation of aircraft, developed before the appearance of supersonic aerodynamic design, missiles, computers and electronic warfare, was the last generation in which airmen could feel totally in control of their environment, and the experience was a powerful one.

This book, originally published in twelve volumes tells the story of these remarkable aircrafts.

Included are complete specifications and performance figures, the stories of their battles told in the words of their pilots, the failures as well as successes all complemented by beautiful, detailed and often HUGE illustrations -

24 (twenty-four) 21'x13' and 32'x13' color posters!!!

Tens of colored annotated illustrations:

- general view
- cutaway
- engine

- cockpit layout
- engine cutaway
- armament setup
- fire arcs
- interesting electronics/mechanics arrangements
- multiple camouflage schemes

The general impression is that literally every significant part of aircraft equipment was carefully drawn in color from 2 angles at least.

The table of contents:

Boeing B-17 Flying Fortress

Lockheed P-38 Lightning

de Havilland Mosquito

Focke-Wulf Fw 190

Messerschmitt Me 109

Mitsubishi A6M Zero Fighter

Supermarine Spitfire

Grumman F6F Hellcat

Chance-Vought F4U Corsair

Junkers Ju-87 Stuka

Avro 683 Lancaster

P-51 Mustang

Best of the best...

By A. D. Morrill

I bought this book new from the Smithsonian Museum bookstore when I was just a kid. Now some 20-odd years later it still sits on the shelf right behind my desk, and I still frequently comb through its pages with the same enthusiasm I had when it was new. I will never let this book out of my possession.

It's so valuable to me I had to find another copy for my business partner and fellow R/C fanatic so that he

wouldn't have to keep borrowing mine! ;D ...that's why I decided to drop my 2-cents in here.

If you are an airplane buff, or more importantly, if you have any passion for the top planes of WWII, this book is not optional. You MUST have it. Period. Once you open it, you will understand what I am saying.

The Bible of World War II Aviation

By T. B. Engvig

I fell in love with this book when I was 10 years old, and I can say without hesitation that I owe my subsequent fascination with military history directly from thumbing through its pages at that early age. The other reviewers are not exaggerating, this book is THE BIBLE of WWII aviation. The aircraft profiled, though limited to 12 key models, are wisely chosen, all having had an enormous impact on the war, being in service through most, if not all, of the conflict, and all being instrumental in their nations war efforts (and final victory as in the case of the Allied machines).

This book occupies a proud space on my bookshelf, and every now and then I will take it down and nostalgically thumb through its slightly worn pages. It never gets old. If this book was \$300 it would still be a good buy.

What really takes the cake is without a doubt the full color fold outs by Watanabe. If you can find better ones elsewhere I am Kaiser Wilhelm! The planes practically leap out at you; every screw, nut, and bolt is there. On several profiles the detail is so astounding you can see the oil streaks on the engine cowling and the weathered paint at the wing root where the pilot would have stepped time and again to climb into his cockpit and zoom into history.

Even if you only have a passing interest in WWII, you must buy this book. Do it now, before it is too late!
